Dear Bill,

Thank you for QSL of July 12, 1977 on the reception of KIOS-FM. KIOS is Nebraska's only qualified public radio station offering National Public Radio programming as well as local public affairs and fine music broadcast. We operate at a power 25000 watts effective radiated power with our antenna at a height of 640 feet above average terrain. Transmitter output power is 5000 watts.

The greatest distance we have been logged at is from a listener on the east coast. Needless to say, this type of range is very infrequent.

Good luck on your dx logging and your very interesting hobby.

Sincerely yours,

  
Jim Minear
