SUNPAPERS TELEVISION

THE A. S. ABELL COMPANY

BALTIMORE 3, MARYLAND

May 28, 1954

Mr. Maurice W, Nittler  
Geneva, Nebr.

Dear Mr. Nittler:

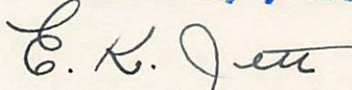

This will acknowledge the receipt of your report of long distance reception from our television station, WMAR-TV.

A number of similar reports have been received from viewers whose receivers are located up to 1800 miles from Baltimore.

This is attributed to sporadic E layer transmission from the ionosphere and cannot be relied upon at any particular time. However, this very unusual type of transmission takes place mostly during the spring and summer months.

We wish to thank you for advising us in regard to the reception of our signal.

Sincerely yours,

E. K. Jett  
Vice President
