Mr. John Sampson

I have just been handed your request for verification of reception on December 16th. I have read your log and it seems to be quite accurate. Our station uses a Bauer 5000 watt transmitter which we have modified so we can broadcast at 500 watts from 6:00am until sunrise at which time we raise our power to 5000watts. This month that is 6:15am.

We are getting ready to install an FM stereo system to be on the air about June at 94.3 Mc. We will use a 250 watt Bauer transmitter which they are building for us at this time. The call letters will be KPER. I have enclosed a map showing our signal curve. We are using a directional system to protect KDIA in Oakland which is at 1310 kc.

Your's truly,

Steve Woodard

(engineer)
