Mr. Sampson,

I am always glad to get d.x. reports and try to answer them as soon as possible. I just took the position here as cheif engineer and this is my first letter from you. Talking with the program director , we have come up with the reason for your reception. We are, as you know in the high Sierras. The tower is located on de-composed granite, which makes the worst ground possible. However on the night of your reception it was raining, and this increased our ground a great deal. I am sorry nobody has answered your reports before but I am happy to repert that you may now add us to your list of stations.

Yours truly
Gerald Susoeff
Cheif Engineer
