Mr. John Sampson
23 Terrence Ter.
Freehold, N.J.

May 29, 1964

Dear John :

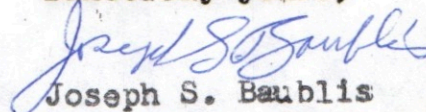

This letter confirms your receiving of Radio Station WARE, in Ware, Massachusetts. We appreciate your interest and thank you for your reception report.

Radio Station WARE went on the air in 1948 with a power of 1000 watts non-directional daytime. At that time, the station used one self supporting 210 foot tower. The basic equipment was supplied by Raytheon and today we are still using the original transmitter, limiter and console.

In 1959, WARE received authorization to operate full-time using a directional antenna at night. The equipment for night operation includes a Gates phasor and two additional guyed towers making a three tower array. Our night pattern is approximately a figure eight with one lobe larger than the other and the deepest null towards WRYT in Pittsburgh, Pennsylvania.

WARE will confirm valid reception reports with a letter providing postage is included.

Sincerely yours,

Joseph S. Baublis

Chief Engineer
