October 4, 1964

Verification report;

To; John Sampson
23 Terrence Ter.
Freehold, N. J.

This is to verify that our technical log shows we were conducting engineering tests on Sept. 2, 1963 and that the transmitter was on the air and being modulated with our standard I D- from 4:31am to 4:37am.

Dear John:

Sorry for the delay, just found your letter. It may be interesting to know that at the time you received WORC we were on the air with 5 KW and in our day pattern. The transmitter is a Collins 21 E which operated on 1 KW night pattern and 5 KW day pattern.

Very truly yours,

Gordon L. Dyer
