

*The* 1000 *watt* TRI-CITIES STATION

- NEENAH
- MENASHA
- APPLETON, WIS.

May 3, 1961

John Sampson  
305 Jefferson St.-So.  
Apt. 10  
Hutchinson, Minn.

Dear Mr. Sampson:

Received your report of reception of this station on April 30 from 6:30-6:46AM and am happy to verify that all the information reported is correct. Thanks for the good report.

Concerning the other things you mentioned, our transmitter is an RCA BTA-1L, 1 kw. transmitter.

We have three towers here. During the day only the center tower is used giving us a non-directional pattern, and at night all three are used to give us basically a figure 8 pattern with the major lobe to the northeast and much smaller lobe to the southwest. The time of your report indicates that we were on our daytime pattern.

Thanks again for the report. We have filed an application with the FCC for increasing our power to 5 kw. daytime so hope to get a lot more such reports in the near future.

Yours truly,  
*Gordon Dailey*
