

06/21/95

John Sampson
4949 Aldrich Avenue - South
Minneapolis, Mn. 55409

Dear John,

This letter will serve to confirm your reception of KSYG-AM at 1010 kHz on 11/1/94 from 4:38pm to 5:00pm CST. The programming details you described do reflect an accurate representation of what was broadcast at that time.

The KBIS facility is licensed for non-directional operation at 10,000 watts from local sunrise to local sunset. During the nighttime we transmit a directional signal at 5,000 watts utilizing a four tower array. The nighttime pattern is an asymmetrical figure-8 oriented roughly along a line ENE to WSW.

Thanks for your report and good luck in your hobby.

Sincerely,

Norm Laramee
Chief Engineer KSYG-AM
