

CONFIRMATION of your report of
reception of our Broadcast Signal
at 12:07 EST on Dec 22 1978
Frequency: 1490 kc

Remarks: Good to hear from
you. I note you're equidistant from WGCH, WBCB,
& WDLC. I guess WBCB really gets out well...
WBCB is frequently heard around here on late nite
sky-wave. I would guess WGCH would dominate
1490 kc about 20 miles SE of you, near Matawan,
where our signal would benefit from a water path.
A copy of our coverage map is enclosed, although
we do receive interference from WUSS in the
Eastern part of our Connecticut "coverage".
