April 17, 1973

Dear John:

This will confirm reception of Broadcast Station WJLK at 6:15 am April 15, 1973.

During daytime operation we operate with a directional antenna and protect stations to our north. The result is we send about three times as much power to the south and southwest. The power to the north is the same as when we operate non-directional nighttime. The transmitting site is located in Neptune Twp. about one and a half (1½) miles due west of Asbury Park.

Thank you for your interest.

Frank Huber
