Dear Mr. Sampson

After checking your times with our program log, I am pleased to confirm your reception of station WKMB. WKMB has been on the air since last February, and operates with authorized power of 250 Watts daytime.

Our transmitter is in Gillette, and utilizes a 5/8 wavelength tower of 148' overall height. Our signal is omnidirectional and generally is readable on the fringes of a 30 mile circular countour. We have received frequent reports from Staten Island, Bayonne, Jersey City and other similar easterly areas.

Thank you for your report on our signal, and if ever I can be of some future aid to you, feel free to write in.

Resrectfully yours,

David S. Shefts
