Mr. John Sampson
7940 Pacific
Omaha, Nebraska

Dear Mr. Sampson:

May this letter serve as a confirmation and an expression of our appreciation for your recent reception report of K-JIM's special test program.

During the week following the test, we were deluged with letters from Seattle, Washington to Jamestown, New York.

Radio Station KJIM, with combined studio and transmitter operation, is located at the Trinity River in Riverside near downtown Fort Worth. K-JIM utilizes Raytheon console and transmitter equipment. The antenna is a 285' tapered, self-supporting, series-excited, vertical steel radiator, with a top-mounted UHF receiving antenna. The ground system consists of 180 equally-spaced buried copper radials varying in length from 235' to 300'.

Again, thanks for your reception report, and good luck with your DXing program.

Very truly yours,

C. L. Grubbs
Chief Engineer
