Mr. John Sampson  
Omaha 6, Nebraska

Dear Mr. Sampson,

This will confirm your reception of KVIC March 26, 1956. We are only 250 watts and you were doing good in receiving us, especially in identifying the short station breaks. One reason the tone was not too heavy is that we were running some proof of performance tests, and some of the modulation was as low as 25 per cent.

Thank you for letting us hear from you.

Yours sincerely,

*Vic Boldt W5QYL*  
Vic Boldt, Chief Engineer
