Dear Sir:

This will verify your reception of WDXR in our third hour of broadcasting. We went on the air at 2:45pm Dec 24.

In answer to your questions, I quote from the engineering statement on the Antenna system.

"Tower No. 1 (Southwest) and 2 (East) are on a line bearing  $72^{\circ} T$ . Tower No. 3 (Northeast) is on a line bearing  $37^{\circ} T$  from a point midway between towers No. 1 & No. 2. Overall ht of each tower is 165 ft. 160 ft above base insulators

I have no spare copies of the pattern but will try to sketch one on separate paper.

Thanks much for listening & reporting.

Good Night

Paul Lawrence  
Chief Eng.
