Omaha, Nebraska 68107

Dear Ernest:

We have received your report of reception of KDAY on Sunday, November 19, 1972 at 10:26PM and I'm happy to confirm that you were hearing KDAY at that time. Usually our signal gets alot of interference from XEDM at night in your part of the country. They must have been off the air. Eventhough we run 50,000 watts at night, it is directed mostly south and west as you can see from the map enclosed. When there is no interference from XEDM however, we still can be heard just about everywhere in the US at night.

Thank you very much for your reception report. We enjoy hearing from National Radio Club members and from listeners around the world.

Sincerely,

Andy Laird
Chief Engineer
