1416 Pasadena Avenue
Omaha, Nebraska 68107

Dear Mr. Wesolowski,

Thank you for your reception report of the prearranged test broadcast for the National Radio Club, on Monday, December 1, 1975, from 0030 to 0100 hours (24hr time) P.S.T., on the frequency of 1580 khz.

The reception log which you indicate is correct with the following comments:

1. The 500 cycle tone you refer to, was 800 cycles.
2. The periods of open carrier was probably mistaken for another station's programming. Actually we were transmitting music, namely selections from the album "Street Fair" by the Magic Organ.
3. The station I.D. given 3 times at 0043, I was on the phone with a listener (member) from Youngstown, Ohio. It was purposely done for reception verification.

I do not have a copy of an actual propagation map at this time, however find enclosed, a "service area" presentation we give to prospective advertising clients.

Thank you again for your report, and the best of seasons greetings to you and your family.

Very truly yours.

R. R. Bunton ("Bob")
