KISSIMEE FLORIDA

Mrs. ERNEST J. WESOLOWSKI

We are pleased to acknowledge and verify your reception report of ~~10/31/66~~ at 3:23 - 332 ^{AM} _{EST} o'clock EST. For your information WJPB is owned by the B & M Broadcasting Company, Inc. WJPB's transmitter is located one mile east of Kissimmee Florida at Lat. 28.3 and Long. 82.17 The transmitter site is 57 feet above sea level and our new Rohn Tower is 213 feet high. We transmit with a Gates BC 1J 1 KW Transmitter located in our main studio and transmitter building at the foot of the tower. The transmission line is 56 inches of 5/8 inch copper rod connected directly from the transmitter to the base of the tower so we have little or no transmission line losses. The audio rack equipment is Gates, however, our control room is Collins equipped. WJPB started broadcasting on April 30, 1966 on a daytime basis, programing a good music format with emphasis on local events and news. We are a member of the United Press International and the United Press Audio Network. Kissimmee is the county seat of Osceola County. Kissimmee is the Cow Capitol of Florida and the home of the world famous Silver Spurs Rodeo. Disneyland East which will hold the city of tomorrow and yesterday are located seven miles west of Kissimmee. We are also 40 air miles from the Kennedy Missile Test Center.

Once again we thank you for your report.

Chief Engineer

KISSIMMEE FLORIDA

Please excuse the delay in our confirmation of your report, the reason is that we might send you a tabulation of the results. First let me also appologize for the fact that bur studio clocks were about 90 seconds off. We set our clocks to WDBO Orlando and there had been a local power failure between sign off Sunday and the test, Monday morning and WDBO was off the air.

We received 71 letters, mostly from the midwest, east, and eastern Canada. The fartherest reports were from California, however, most reporting stations in California reported fair to bad reception. We received one report from south of our station, Kingston, Jamacia. The strongest signals were in Western New York, Ohio, and St. Louis Mo. Good reports also came from Nebraska, Huston, Texas, Iowa, Michigan and Ontario Canada. Enclosed you will find pamphlets from the C of C of both Kissimmee and St. Cloud which is eight miles east of our transmitter and in our strongest ground wave pattern.

It was a pleasure running the test for the NRA and we look forward to the opportunity again. When you come to Florida you are invited to stop in for a visit at the station, on the shores of beautiful Lake Tohopekaliga.

73's and good DX'ing

Yours truly,

Dave Aubert, Chief Engineer
