Omaha 7, Nebraska

Mr. Wesolowski:

Re; Reception Report 63-144, Sunday, April 28, 1963, 12:52AM CST:

KCFI RADIO was on the air during the period with frequent ID's and unmodulated carrier. We were choosing a used 4-250-A final for the rf section for visual balance. KCFI operates daytimes with a power of 500 watts directional, protecting KCUE, Red Wing, Minn. and another station in Fergus Falls, Minn. WREN, Topeka does come in here with a readable signal at our sign-off.

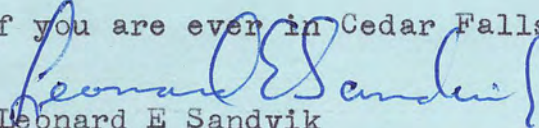

KCFI was established in February, 1958, operates with a Collins 550A-1 (250-500 watt) transmitter, two 185 foot towers located a mile and half west of Cedar Falls, Iowa on Hwy 20.

We were unmodulated until approximately 12:20AM on the date of this report, thereafter, modulating around 95% with waltz music on Lawrence Welk. We use a Collins 212F console, Symmetra Peak, automatic gain control and a Collins limiter in our audio line up.

We usually run our monthly frequency checks from 1:25-1:40AM on the 17, or 18th..sometimes as late as the 22nd of the month.

We are a "good music" station, major stockholders also own KSMN RADIO, Mason City, Iowa.

If you are ever in Cedar Falls, stop in and visit us.

  
Leonard E Sandvik  
Operations Director  
(Chief Engineer)  
(Program Director)

A GOOD MUSIC STATION ON 1250 KCS.
