Omaha 7, Nebraska

Dear Ernest:

First many thanks for your reception report of July 11th. That would be for a frequency check which we have the second Monday of each month from 3:30 to 3:45 MST. Commercial Radio Monitoring Company of Kansas City does out checking.

To answer your questions our studios are located in downtown Ogallala with the transmitter located $\frac{1}{2}$ mile north of town operated by remote control. We use Gates equipment throughout. The transmitter is a 500 watt unit and our antenna is a 250 foot tower, guyed.

Thanks again for your report.

Sincerely,

Howard L. Harrington
