Mr. Ernest J. Wesolowski  
1416 Pasadena Avenue  
Omaha 7, Nebraska

Dear Mr. Wesolowski;

Thank you very much for your reception report from Omaha. Save for an hour's time discrepancy, your log checked quite closely with the station's log for that time of the morning.

As you know, we operate on 570 kc. with an output power of one kilowatt. The transmitter is a Collins 20V-2, the Speech equipment mainly of Gates manufacture. The antenna is a single 307' tower. About 9.5 miles of ground wire is used.

The after-midnight tests, one of which you picked up, are conducted at this station about every week or week and a half. If we sign on at all, it is generally right at midnight. The tests are run to determine any of a variety of possible faults.

We have an application in for five kilowatts, but it will be several months before we know whether or not we will increase power.

Thanks again, hope to hear from you again sometime.

Sincerely,

James L. Tonne, Ch. Engr.
