Omaha, 7, Nebraska

Dear Ernest,

Sorry, I am so slow but you caught me right in the middle of a proof of performance and haven't had too much time for correspondence.

This is to verify your report of reception, as ID and tones were given at the times indicated. The frequency measurement was with Commercial Radio Monitoring Company of Kansas City, Missouri.

We are located with both studios and transmitter about $\frac{1}{4}$ mile west of Cheyenne on highway 30. The transmitter is a 1Kw Gates . BC-1E if I remember the numbers correctly. It has a pair of 833A paralleled in the final and feeds into a 200 foot shunt fed tower.

I will enclose a coverage map with this letter. Hope this covers what you wanted.

Sincerely Yours

David K. Wood
