Tampa, Florida

Dear Sir:

Received your letter concerning the frequency check that was conducted on September 18, between 2:30 and 2:45. It is good to know that the signal was going out that far. We were being monitored by Straine Engineering in Atlanta Ga. This is a test that we run the third Monday of each month.

Thanks for the information concerning the other/past WAAO. This was some information that we here at the station were not aware of. The station here first sign on the air in April of 1967. Jim Williams, the station manager, had formally been at WAMI in Opp, Alabama and him and his wife are the owners of the station here. The station is basically a C&W station, programming for local interests.

I hope that I have answered a couple of the questions that you had in your letter. I am the program director and also I do the up keep on the equipment. Hope to hear from you again and maybe you'll be listening again on the sixteenth for our next frequency check and I try not to play the say song over and over even though it will be Boots Randolph.

Yours truly,

Charles E. Grantham
