David F. Thomas
Proctorville,
Ohio

Dear David,

This is to verify your report of your reception of our frequency check of Dec. 12, 1949 (2:00-2:15 AM M-S-T). This check was our best of the season as far as DX was concerned. As you know we operate on 1450 KC at an output power of 250 watts. Antenna height is 192' overall and transmitter is Western Electric with composite input equipment. Douglas is located in the extreme southeast corner of Arizona right on the Mexican border and is at an altitude of 4000' above sea level. Weather at time of check was clear and around 45 degrees. Our regular frequency check schedule is the second Monday of each month from 2:00-2:15 AM M-S-T.

Sincerely,

Rick Hendricks
Chief Engineer
