Radio Station WBRO
P.O. Box 151
Waynesboro, Georgia

Dear Mr. Thomas;

Thank you very much for your letter of October 19, 1960, in answer to my request for DX reports. Yours is the first report that we have received concerning this particular Frequency Check transmission. We hope to hear from others soon.

I received a report from Ohio just about eight months ago, but somehow it was misplaced and I do not know from what part of Ohio it came.

I am sorry also that you could not give me a more favorable report, but I was also very glad to hear from you so promptly. Interference on 1310 seems to be very great in that part of the country.

We are not the WBRO that was in Forest City, N.C., on 780 kcs. and I was not aware that there every/ was such. Thanks for the information. We have been in operation since 1954 with a tower that is 64 feet to long for the quarter wave length, but it doesn't seem to bother our coverage at all.

I will be very glad to hear from you again in the future and I think that our frequency check day may be changed because of the QRM.

1310 KCS.

1000 WATTS
