

April 20, 1957

Mr. David F. Thomas
Proctorville, Ohio

Dear Mr. Thomas:

Glad to verify your report on reception of KEOK April 13, 1957 during our test program. Last fall we had report of reception during regular operating hours from someone in your state. Possibly the static conditions you mentioned account for it.

KEOK is daylight-directional with two 325 ft towers top loaded; Collins gear; Andrew phaser, and General radio monitors. Went on air for first time in May 1956.

Have had reports of consistent daily reception in Texas, Louisiana, Arkansas and all states adjoining Iowa. Two reports from Ontario during test program.

Thanks for your report.
