Proctorville, Ohio

Thank you for your BCL report

KIDO is happy to confirm your excellent report of

reception during the period 1:00 to 1:30 am on Feb 27th, 1961

And thank you for the note concerning KIDO's past!

KIDO's transmitter is an RCA Model BT-5-F, installed in Late 1950. The antenna system is a 3-tower-in line wide-spaced-element directional array, with different patterns for day and night operation. The transmitter is located in the desert country southwest of Boise and is fully remote controlled from KIDO's Boise studios.

You're too close to CKRC
for comfort -- but your
report was correct!

JOHN A. MAXSON, Chief Engineer
