Dear Friend-

We use the word "Friend", for surely, some little friendly feeling must have been behind the effort necessary to write us reporting on our test programs.

We appreciate your report, and though it means that we must send out several hundred letters after each program of this nature, rest assured that we will always be more than glad to answer any inquiry regarding this station or its programs.

KRMD is a 50 watt Station using an 852 output and a 212D Modulator. We were using a condenser microphone made by our engineer on the test. The entire station is composite, using a three stage amplifier consisting of two stage transformer coupled into the 212D. All of the equipment even to the condenser microphone is composite. Our Antenna system is a four wire "L" Type and counterpoise using voltage feed Hertz.

We verify your report on our program of JAN 10 1931
We operate on a crystal check frequency of 1310 Kilocycles.

Very truly yours,

Radio Station KRMD.
Shreveport, Louisiana.
