David F. Thomas
Proctorville, Ohio

Dear Mr. Thomas:

From the letter you sent, you no doubt were listening to our stations. The one correction is the fact that the FM power was misunderstood. We have a 3,000 watt Western Electric transmitter, and a lousy antenna which when figuring the transmission line loss only gives us a radiated power of 5300 watts. We are considering the possibilities of a newer style antenna which will boost our radiated power to about 20,000 watts.

Apparently you did not hear the announcer say the fifty in the fifty-three hundred watts power. We have been getting regular mail response from the EauClaire area, so it is in our opinion good coverage for the signal strength.

Thanks much for your letter, and if you are ever in the area again, feel free to drop in and visit with us.

Respectfully yours,

Earl Larsen, Engineer
