Mr. David F. Thomas
PO Box 11531
Tampa, Florida

Dear Dave,

I'm like you, a little late in getting my correspondence caught up.

This is a confirmation of your reception report of this station on the special test 0200-0217 of 2 Feb 1976. The program consisted of alternate 400 hz and 1000 hz tones, with both live and taped ID's between. the tones were of 10 second duration. Almost all the listeners said that the last ID at 0215 was the loudest, and heard by them the clearest.

May hold another test at a later date, but none scheduled for now. Our regular frequency checks are held the mornings of the 2nd Sunday of each month, somewhere between 0030 and 0130 CST as scheduled by our Monitoring Service.

Sincerely,

R. L. Woods
Chief Engineer
