Mr. David F. Thomas,
Longwave Listening Post,
Radio W.U.M.S.,
Proctor Ville, Ohio.

Dear Mr. Thomas:

We enjoyed hearing from you and found your report of findings while in this district very interesting, it was our crew to whom you were speaking in Kapuskasing.

I find your views coincide with impressions we have had for some time, I believe you will the Sudbury's Stations retarded by the large deposit of nickel in their district.

Night time reception of USA stations in this district is terrific all year around and it seems that Chicago Stns. have the upper hand over the others. We do not count on getting into Kapuskasing at night, but at times we are fortunate, although I have found the Kap Inn a very difficult place for our station to be received at any time. The local interference is outstanding in the North and we do get numerous complaints concerning it and there is little we can do about it that brings results, except to keep our Modulation up to peak and hope to overcome it in most cases.

Again thanks for your report and we hope to have another from you again.

Yours very truly,

Timmins Broadcasting Ltd.,

E.D. Mott.
