Tampa, FL

Dear Mr. Thomas:

This is to verify your correct report of WRIB.

WRIB operates with 1000 watts daytime only with 500 watts pre-sunrise. The single tower for non-directional operation is on an island 500 feet from shore in upper Narragansett Bay.

The main transmitter is a 1946 General Electric XT-1A with a Raytheon 250 watt RA-250 auxiliary.

WRIB has been heard in most states East of the Mississippi and many Western states on several DX tests.

Thank you for the report.

Technical Department

S. Craig Keely
