

February 22nd. 1950.

Dear Mr. Thomas,

I was indeed very happy to receive your report of the reception of our station in your city of Proctorville, Ohio. Judging from your report we certainly were putting in a very good signal for a 250 watt station. But then again I guess it is highly possible to span the world when the interference is nil.

Before I forget it let me say that your program report was entirely correct and I am happy to send you this verification.

You have an usual reply card that took my eye. I wonder if you could inform me where the "International DX'ers Society" headquarters is located and a bit of the background of the organization?

The equipment here is Collins throughout and the antenna is a 267 foot guyed steel tower. The town of Hamilton has a population of about 5000 and is sustained chiefly by agriculture and livestock raising.

Thanking you again for your interest in the special test program, I remain,

Sincerely yours,

Carl L. Kelley  
Chief Engineer KCLW
