NORTH SHORE BROADCASTING CORP.

February 5, 1995

Mr. Philip J. Greenspan
101 Forge LANE
Marshfield, MA 02050

Dear Mr. Greenspan:

Thank you for your reception report of January 31, 1995.

I am pleased to confirm your reception of WOBM (AM) on January 31, 1995 from 10:08 to 10:16 PM EST.

WOBM operates at a power of 5000 watts daytime and 8900 watts nighttime with a four-tower directional array with its main lobe to the south/southeast. WOBM is one of the few U.S. AM stations which actually runs higher power at night. Our main transmitter is a solid-state Harris DX-10 and we broadcast in AM stereo using the Motorola C-Quam system.

During the summer tropo season, you may also want to try for WOBM-FM on 92.7 MHz. Thank you for your interest in WOBM.

Sincerely,

Philip E. Galasso
Chief Engineer
