MILFORD • DELAWARE

930
ON YOUR DIAL

March 31, 1956

Mr. Paul A. Thomas
Box 1614
Proctorville, Ohio

Dear Paul;

Thanks for the fine report of receiving our test program on the 13th from 1:05AM - 1:20AM (EST). This is to verify your report as correct.

We operate here with 500 watts into a directional antenna that is a "figure 8" pattern with its major axis in almost a North-South direction, therefore, in your direction the radiation is definitely reduced. This is necessary to protect WFMD at Frederick, Maryland, which also operates on 930 K.C.

Incidentally, on December 6, 1954 I conducted a "D-X" program for the National Radio Club and the Newark Radio Club and got a reply from a David F. Thomas...any relation?

You might also be interested to know that it was I who puts on the monthly frequency tests each second Tuesday at this same time.

Thanks again, OM, for the mighty fine report!

Sincerely yours,

Charles V. Lundstedt
