Paul A. Thomas
Proctorville, Ohio

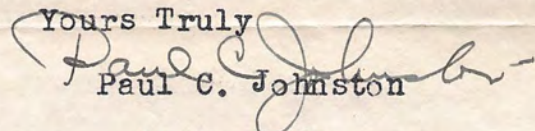

Dear Sir:

The information you sent us was rather meagre but it was enough to identify us as far as I am concerned. And I might say that for that receiver and what you were using for an antenna it was more than enough. Here is your confirmation. I have been busy as a little bee this evening answering other letters much like yours.

Last month we received a number of letters and cards containing very much the same information. Some as far away as the East coast. Transmission conditions must have been very good on those nights. We are using a Collins 300G transmitter here and nearly all the rest of our gear is Collins also.

I hope we shall hear from you again when we get our new one kw rig on the air.

Yours Truly

Paul C. Johnston
